

URBAN TRAFFIC

Nowadays traffic is become a big problem. Traffic causes pollution. At rush hours is a lot of cars on the street. And they must wait for hours. There are not enough parking places. Commuters don't have a place for park their car. Commuters must use a public transport. But there are problems too. Buses and trains drive too rarely and cost more if you have your car.

Solution to the problem is that public transport must be better and cheaper.

THE BEST SOLUTION

I think the best solution is in Singapore. Public transport is cheap. People will have to borrow money and the air will be less polluted.
